

X-TRACE

Back in the day we started to think about a universal binding which would work easily with most of the shoes, give good feel for skiing and be stable enough for telemarking and Nordic ice skating. The X-Trace has now been in the market for five years and has gained a strong position among backcountry bindings.

The X-Trace universal binding is adjustable to most boots with a flexible sole and offers good control and flex for touring. X-Trace is made of high quality materials, without any compromises.

X-Trace PIVOT

PIVOT is an updated version of the X-Trace. Longer flexplate allows a use of bigger boots and the hinge gives better ski feeling, more lateral stability and easier climb on ascent. Long straps works with all footwear from polar boots to hiking shoes.

NN 75 screw pattern
weight: 1080g / pair
Boot sole length: 24cm - 37cm

X-Trace EVA

X-Trace EVA is the standard version of X-Trace bindings. It is equipped with normal flexplate, which works better on skates and rollerskis.

NN 75 screw pattern
weight: 1060g / pair
Boot sole length: 24cm - 33,5cm

X-Trace KID

Same great concept for children and women with small foot size. With these bindings backcountry skiing is possible with warm winter boots or normal hiking boots.

NN 75 screw pattern
weight: 1020g/ pair
Boot sole length: 21 - 29cm
